

Fax Over Internet - FoIP

Virtual Fax in the Cloud

IPitomy Virtual Fax makes faxing a breeze no matter where you are. Choose a package that fits your company. Fax outbound from your browser, desktop, email or from a traditional fax machine.

Fax from Your Desktop or Mobile Phone

Receive your faxes via email or fax machine. Faxes can be delivered as .pdf files to your email. Sending options include sending from your desktop using a fax driver that works just like a printer, sending from your browser or using encrypted fax for compliance with government regulations.

Fax to Fax (Old School)

Keep that traditional fax machine. If you prefer to use your existing fax machine like it does now, no problem. IPitomy's Fax to Fax provides an adapter device that simply acts as a phone line for your fax machine.

No Phone Line Required!

The good news is that you do not need to pay for phone lines. Fax to Fax is Fax Over Internet. Since it collects all of your fax and sends it to our Cloud Based Fax Servers, phone lines and problems with faxes are a thing of the past.

Eliminate Line Cost

Regardless of which plan or plans you choose, you will never need to pay for a phone line again. You are leveraging your existing Internet connection to send higher quality documents.

Select the Plan That is Best For You

Each virtual premium account includes one fax number and one email account and unlimited inbound faxing. IPitomy Fax Virtual Premium solution allows you to receive faxes as emails in .pdf format and to send via your desktop, mobile phone or email. Faxing has never been easier. Just upload or attach your document, enter in your fax# and click send!

Encrypted Fax

Some businesses must comply with government regulations such as HIPPA. Encrypted fax stays encrypted until you download it. A link is sent to your email and you log into a password protected portal to access your documents.
