

SIP Door Box with flexible features.

IPitomy's IP710 door box is designed to allow access to doors by triggering a call to a person or a group of people. When the call is received, the user can speak to the guest who is waiting at the door. The user can admit the guest by dialing a code that triggers a door strike to unlock the door. The IP710 is compatible with just about any door strike.

The IP710 is made of brushed aluminum designed to be waterproof, dust proof, and tamper proof. Access card devices are supported making it perfect to be used in banks, public transportation, school systems, power plants, mines, prisons, manufacturing facilities and any facility that requires security notifications.

Mass Notification

In addition to providing a secure entry solution, the IP710 is also useful as an emergency notification button. When combined with IPitomy's powerful paging, multi-cast and announcement features, the IP710 can be deployed in areas where a fast and easily accessible alarm is available. When triggered, an announcement can be played over the paging system, emails can be sent and text messages can be sent as part of a mass notification system.

- One touch dial and bi-directional full-duplex voice intercom.
- Panel uses advanced aluminum alloy wiring and a high strength damage resistant button making it strong and durable.
- Supports POE or external power supply.
